# dakota marketplace

# Dynamo Authentication Documentation

◤ Introduction:

The Data Integrations application is an embedded application in the Salesforce Marketplace. It allows the user to link Dakota data with multiple CRMs. The users can select the CRM and link data with the respective CRM. The linked data will be synced with the connected CRM in the form of either a new record or linked with an existing CRM record. The linked data will also be updated (in case of any update).

To connect Dynamo CRM with the application, you need to enter an Authentication Token of the respective CRM. Now, let's take a look at how to get the token for Dynamo CRM with the following steps:
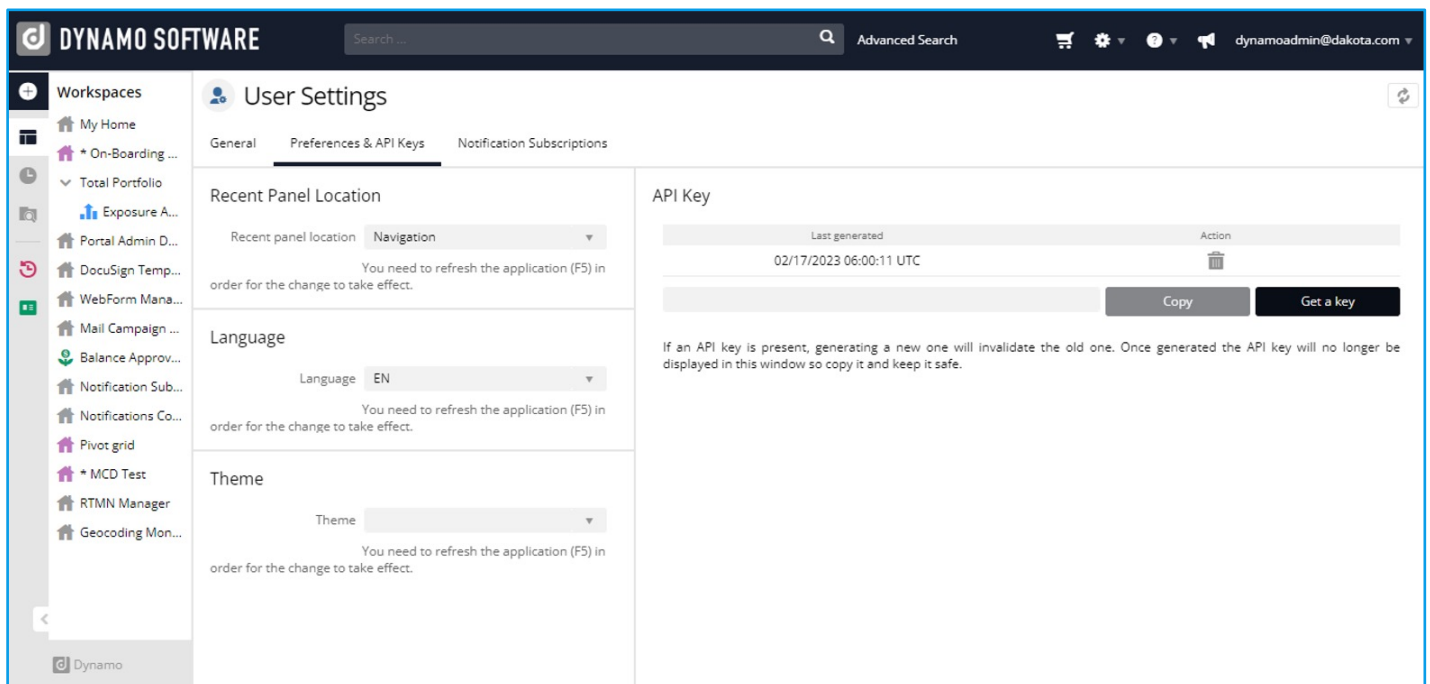

- **Step 1:** Click the Dynamo Login Page (https://dynamo.dynamosoftware.com/):

- **Step 2:** Enter the login credentials
  (After the login page, the user will be redirected to the Home page as shown below:)
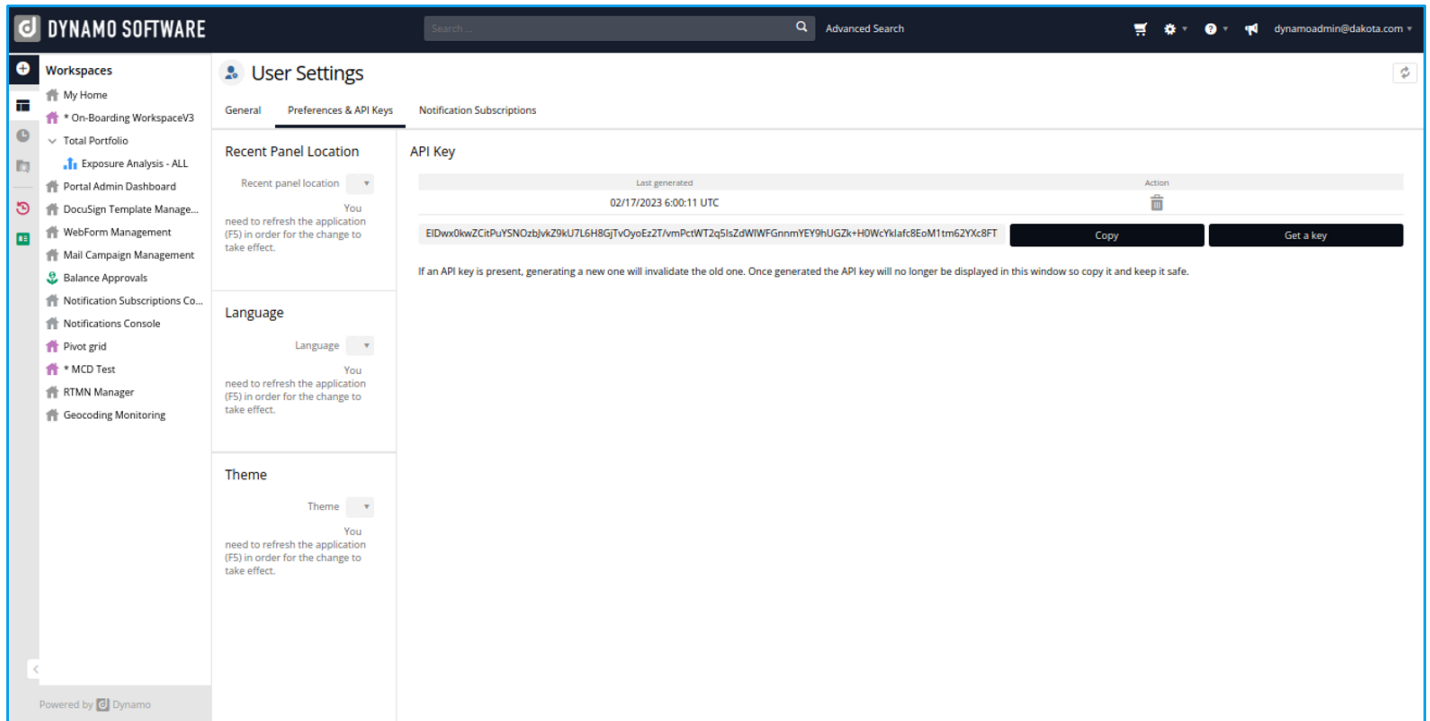

- **Step 3:** Click 'Username' **>** 'User Settings' (present on the top right)

- **Step 4:** Navigate to 'User Settings' **>** 'Preferences & API Keys'

- **Step 5:** Click the **Get a key** button

- **Step 6:** Copy the **newly generated key** (which will be used as an authentication token)

Now you've got the 'Authentication Token', and you're ready to connect your Dynamo CRM with the 'Data Integrations' application.
